

Data Centre Consultancy Company

Our customer, a large Data Centre Consultancy company based in West Sussex contacted ICS to help resolve an HVAC cooling requirement to suit their new server room.

The company who specialise in building and managing data centres, server rooms and comms rooms for multi-national organisations were looking for a stand alone packaged chiller unit to suit their application.

Packaged Chiller Solution

Following the initial enquiry and taking the customers requirements and preferences into account ICS Sales Engineer **Owen Hymers** was able to recommend a **TAE Evo 051** packaged chiller solution that met all the site requirements.

TAE Evo Range

The **TAE Evo 051** chiller is a lightweight packaged unit, with **20.4kW cooling capacity**. These units are predominately for the process cooling market, however, with reliability and operation a key priority the unit was ideal with it's integral buffer vessel and proven reliability. The TAE Evo is built to manage a wide range of temperature requirements from **+30 to -10°C**.

Nationwide Support

ICS offer a nationwide service for all of your process cooling and heating requirements.
