

# Need to keep a Low Profile?

*Dont worry, ICS have the solution...*

## ...with their Low Profile Chiller Range

Are you struggling with planning permission to replace a chiller in a roofspace. Is the chiller you need too tall for your building profile?

ICS are specialists at designing and building what you need and can help take the headache out of your chiller replacement with our **Low Profile Chiller Technology**.

Whether you're looking to increase your current chiller capacity, replace or upgrade to the latest environmental and efficient technology, we have a solution for you.

We can even help with **non standard** system replacements by designing and building a chiller to the size and **noise attenuation** you need to meet planning regulations with our **bespoke build service** here in the UK.

# Bespoke built to meet any restrictions

Standard chillers are suitable for many applications but are not designed to cope with limited site dimensions or space and weight limitations.

**ICS's low profile chillers** offer an effective solution to any space restriction without a detrimental effect on performance or the skyline.

**ICS has been solving such logistical issues for over 30 years**, and are known in the cooling industry for their innovative and comprehensive product range.

ICS's manufacturing company **Tricool Thermal** are at the forefront of chiller design, technology and application and manufacture the low profile range from their ISO:9001 certified facility in Southampton.
