

## Beverage Cooling

### Project

A large beverage company based near Bradford called on ICS to cool a new bottling line.

The company had recently expanded their on site production adding a new **German manufactured bottling line** to their existing site.

The new line required **400kW** of cooling at **15 - 20°C**.

### ICS Solution

At the required temperatures a free cooling system could have been introduced to take advantage of the UK's low ambient temperatures but due to space restraints this was not possible.

To overcome this a maximum efficiency unit was installed to recover the energy benefit.

As the cooling system was for a food process the customer did not want any Glycol in the system to avoid the risk of contamination.

### Equipment Supplied

ICS Industrial Cooling installed a **Phoenix 160 HE**, this full turnkey installation was supplied with a galvanised frame, tank, pump and stainless steel pipework.

The increased output of the unit reduced on site labor therefore reducing costs.
