

Cooling for Cutting Tool Manufacturers

Project

A manufacturer of Rotary Cutting Tools in the Midlands needed a chiller to serve a cutting fluid cooling and cleaning/filtration plant. Their existing German unit had broken down and they were unable to obtain spares.

Cutting Tool Machine that needed to be cooled

ICS Solution

Due to space constraints the new unit needed to fit into the existing footprint and also had to be installed via the next door neighbours' premises. This was carried out with minimum disruption and production was maintained throughout.

Modified pipework supplied with the TAEevo 121

Equipment Supplied

ICS recommended a rental unit from sister company Cool Energy to stop any down time in production and following a site survey, the unit was replaced with an ICS TAEevo 121 and modified pipework.

TAEevo 121 supplied to fit into existing footprint
