

Eurovent Accreditation

ICS are pleased to announce that all chillers from our MTA brand have now been Eurovent Accredited, giving our customers complete peace of mind that the performance criteria has been independently verified.

Eurovent Certification is a voluntary industrial initiative, whose aim is to simplify the choice of the most suitable components by designers, installers, and end-users.

Technical data stated by manufacturers like performance, energy consumption and noise levels are accurately tested according to the EN standards, to guarantee that the indicated values are real, hence avoiding disagreeable surprises to the customer.

MTA's subscription to the Eurovent certification program, gives more transparency to the performances declared, confidence to its customers and prestige to its products.

ICS Experience

Having supplied over 40,000 chillers since 1989, ICS is the largest supplier of process chillers in the UK and are able to offer a vast array of products and services including:

- A new range of ICS energy efficient chillers helping to reduce power usage and therefore power costs together with CO² emissions.

ICS Aries energy efficient chillers, now Eurovent accredited.

- Turbocor centrifugal compressor technology: oil free, magnetic radial bearings giving unprecedented part load efficiencies and start currents as low as 5 Amps.

- We can assist with chiller swap outs, providing a recovery and disposal service, even temporary cooling where required via our rental division Cool Energy Ltd.
- Microchannel AI/AL condensing coils and optimised refrigerant circuits reduce the refrigerant volume and thus the overall carbon footprint of a project.
- Low profile, "flat packed" chillers and pre-fab plant rooms for specific projects where standard packages will not meet the project demands. UK built and tested to ISO9001 in our 50,000sq ft manufacturing premises just outside Southampton.

ICS custom built low profile chiller
