

Your equipment is at risk this winter

plan ahead with ICS...

With below freezing temperatures and harsh weather conditions your customers plant is at risk of frozen pipework and breakdown, putting their production at risk.

ICS can help to decrease the chances of a breakdown and ensure their chiller is in tip-top condition for the winter.

Food and industrial grade glycol are available from your local depot to help protect from frost damage in the low ambient conditions.

ICS Service can also provide complete winter checks, preventative maintenance and frost protection. This gives you a cleaner chiller system, a greater heat exchange and improved energy cost savings.
